HOW MUCH SHOULD I SAVE?

1. Review your budget to determine how much you need to cover monthly expenses.
2. Multiply this by the number of months you need save for over the summer.
3. Then divide by your remaining paychecks.

Example: you have \$800 of monthly expenses, and you need to cover July and August (2 months). There are 10 paychecks remaining in the year. $\$800 \times 2 = \$1,600$
 $\$1,600 / 10 \text{ paychecks} = \160 deducted/transferred to savings per paycheck.

4. **Use your employer's direct deposit feature or set up automatic transfers at your financial institution based on your calculations.**
